Amit Suthar

Mumbai, India | +91 7014694556 | sutharamit707@gmail.com | linkedin.com/in/amitsuthar69 | github.com/amitsuthar69

EDUCATION

University of Mumbai **May 2026**
Bachelor of Technology in Artificial Intelligence and Machine Learning CGPA: 8.9/10

WORK EXPERIENCE

10Matrix Prime Pvt Ltd Mumbai, India
Software Engineer Intern Jul 2025 – Oct 2025

- Built the backend data layer for a Google Business Health Score system; reduced redundant Google Business API calls via Firestore caching for repeated profile lookups, added observability hooks to monitor cache hit rates and API usage patterns.
- Designed a custom Genetic Algorithm to compute a multi-objective scoring engine, benchmarking Google Business Profiles against competitors; configured CI/CD workflows with GitHub Actions for automated builds.

PoiseCode Solutions LLP Mumbai, India
Software Developer Intern May 2024 – Aug 2024

- Integrated backend APIs for an AI-powered interview SaaS platform, collaborated on job pipelines, team management, and candidate lifecycle tracking modules; deployed across 20+ enterprise clients in 4 countries.
- Built the chat & voice interview module for real-time candidate Q&A, integrated OpenAI STT for transcriptions and TTS for audio responses, implemented proctoring controls including tab-switch detection and video-based cheating monitoring.

SKILLS

Programming Languages:	Golang, TypeScript, Python
Databases:	Redis, PostgreSQL, MongoDB
Libraries/Frameworks:	Gin, Fiber, Nodejs, Express
Tools and Platforms:	Git, Linux, Docker, Firebase, AWS EC2, GitHub Actions (CI/CD)
Coursework:	Data Structures, OOPs, REST APIs, Computer Networks, Distributed Systems

PROJECTS

reConsyl - High Throughput Event Processing Engine | Golang, Docker, Redis, PostgreSQL Github

- Built a state-reconciliation engine that consumes out-of-order, at-least-once event streams and maintains the latest correct event state using version-guarded upserts, preventing stale writes; enforced valid state transitions via runtime state machine.
- Scaled ingestion with a concurrent worker pool coordinated via Postgres row-level locking for cross-worker consistency; benchmarked up to 15K writes/sec, shipped with a REST API, live dashboard and full Docker Compose deployment.

Parsel - Multi-Container Log Streaming Pipeline | Golang, Docker, Redis, PostgreSQL Github

- Built a distributed, self-hostable log aggregation platform that ingests container stdout via node-level watcher agents, normalizes containerd log events, and streams them through Redis Streams for real-time downstream processing.
- Designed a log processing and delivery pipeline using consumer groups including websocket fan-out for web UI, PostgreSQL writers and slack/discord alert webhook, supporting multi-consumer processing and real-time observability.

Portsicle - Join Public Router, Quickly | Golang, SQLite Github

- Developed a ngrok-like reverse tunneling service to create a public ingress endpoint for local web servers, allowing developers to showcase locally running web apps to clients, stakeholders or to test APIs through a persistent websocket tunnel.
- Implemented MessagePack binary serialization with lz4 compression for efficient client-server messaging (70% faster than JSON); showcased at MumbaiFOSS'25 as a Community Partner Project.

Flow - Live Reload Golang Codebase | Golang Github

- Developed a lightweight, live-reloading CLI tool for Go applications using file watchers to automatically detect file changes, trigger rebuilds, and restart processes; Added structured logging middleware for cleaner build and runtime output.
- Implemented process management and intelligent debouncing to prevent redundant builds, significantly reducing feedback loops and improving local development efficiency.

OPEN SOURCE CONTRIBUTIONS

Contributor – Arch Linux GUI Github

Implemented package source filtering (core/extra/AUR) in Arch Linux GUI App Store (Golang, Reactjs), improving package discovery via UI-driven segregation.
